WE desire to call particular attention to the new typewriter desk illustrated on the opposite page, adaptable to all makes of typewriters.

In this model we have made the most radical improvement ever shown in a typewriter cabinet.

The ease with which it is operated and the simplicity of the mechanism will commend itself to you instantly.

When closed, the platform forms a part of the writing-bed (see Fig. 1), the machine being entirely out of sight, allowing more knee space than any other make on the market. By merely pressing a small button, the platform turns as shown in Fig. 2, bringing the machine instantly into proper position for the operator.

Fig. 3 shows the machine ready for use and you will note that there is absolutely no obstruction underneath, permitting the operator to sit as close to the machine as desired. When in this position a touch of the button automatically closes the desk.

These features alone make it the most desirable typewriter desk on the market and we unqualifiedly recommend it to the trade.
